

C# Coding Interview Questions & Answers (.NET)

Most Asked | Freshers & 1–3 Years
Experience

1 Write a C# program to reverse a string.

```
• using System;
• class Program
• {
•     static void Main()
•     {
•         string input = "dotnet";
•         char[] arr = input.ToCharArray();
•         Array.Reverse(arr);
•         string result = new string(arr);
•
•         Console.WriteLine(result);
•     }
• }
```

2 Check whether a string is a palindrome.

```
• using System;
•
• class Program
• {
•     static void Main()
•     {
•         string str = "madam";
•         string rev = "";
•
•         for (int i = str.Length - 1; i >= 0; i--)
•         {
•             rev += str[i];
•         }
•
•         if (str == rev)
•             Console.WriteLine("Palindrome");
•         else
•             Console.WriteLine("Not Palindrome");
•     }
• }
```

3 Write a program to find factorial of a number.

```
• using System;
• class Program
• {
•     static void Main()
•     {
•         int num = 5;
•         int fact = 1;
•
•         for (int i = 1; i <= num; i++)
•         {
•             fact *= i;
•         }
•
•         Console.WriteLine(fact);
•     }
• }
```

4 Print Fibonacci series up to n terms.

```
• using System;
•
• class Program
• {
•     static void Main()
•     {
•         int n = 5, a = 0, b = 1, c;
•
•         Console.Write(a + " " + b + " ");
•
•         for (int i = 2; i < n; i++)
•         {
•             c = a + b;
•             Console.Write(c + " ");
•             a = b;
•             b = c;
•         }
•     }
• }
```

5 Find the largest number in an array.

```
• using System;
•
• class Program
• {
•     static void Main()
•     {
•         int[] arr = { 10, 25, 5, 40, 15 };
•         int max = arr[0];
•
•         foreach (int num in arr)
•         {
•             if (num > max)
•                 max = num;
•         }
•
•         Console.WriteLine(max);
•     }
• }
```

6 Check whether a number is prime.

```
• using System;
•
• class Program
• {
•     static void Main()
•     {
•         int num = 7;
•         bool isPrime = true;
•
•         for (int i = 2; i <= num / 2; i++)
•         {
•             if (num % i == 0)
•             {
•                 isPrime = false;
•                 break;
•             }
•         }
•
•         Console.WriteLine(isPrime ? "Prime" : "Not Prime");
•     }
• }
```

7 Count occurrences of each character in a string.

```
• using System;
• using System.Collections.Generic;
•
• class Program
• {
•     static void Main()
•     {
•         string str = "dotnet";
•         Dictionary<char, int> dict = new Dictionary<char, int>();
•
•         foreach (char c in str)
•         {
•             if (dict.ContainsKey(c))
•                 dict[c]++;
•             else
•                 dict[c] = 1;
•         }
•
•         foreach (var item in dict)
•         {
•             Console.WriteLine(item.Key + " : " + item.Value);
•         }
•     }
• }
```

8

Remove duplicate elements from an array.

- `using System;`
- `using System.Linq;`
-
- `class Program`
- `{`
- `static void Main()`
- `{`
- `int[] arr = { 1, 2, 2, 3, 4, 4, 5 };`
- `var result = arr.Distinct();`
-
- `foreach (var num in result)`
- `{`
- `Console.Write(num + " ");`
- `}`
- `}`
- `}`

9 Swap two numbers without using a third variable.

```
• using System;
•
• class Program
• {
•     static void Main()
•     {
•         int a = 10, b = 20;
•
•         a = a + b;
•         b = a - b;
•         a = a - b;
•
•         Console.WriteLine("a = " + a + ", b = " + b);
•     }
• }
```

10

Find the first non-repeating character in a string.

- `using System;`
- `using System.Linq;`
-
- `class Program`
- `{`
- `static void Main()`
- `{`
- `string str = "swiss";`
- `var result = str.GroupBy(c => c)`
- `.FirstOrDefault(g => g.Count() == 1);`
-
- `Console.WriteLine(result.Key);`
- `}`
- `}`
